PROFILE

Technical Support Engineer also developing with React, TypeScript and Python, with a BSc in Computer Security. At Eskens I built **Eskens Ops**, an internal app the field engineers, warehouse and IT team use every day for the job map, scheduling, rota, tickets and stock. I built it on my own, including the Python pipeline that pulls in our CRM and calendar data, and deployed it to Azure. In my own time I've built an AI video tool that uses several LLMs to go from a title to a finished, rendered video. I'm looking for a full-time software or AI engineering role.

EXPERIENCE

Technical Support / IT Systems Engineer | Eskens Tinting Solutions

Dec 2024 to Present

Eskens Ops (Next.js, React, TypeScript, Postgres, Azure)

- Built and deployed **Eskens Ops**, an internal app with a live job map, service scheduling, rota and IT ticket queue, used by 21 field engineers and office staff
- Engineers used to track jobs in their own spreadsheets, so work got missed and they'd drive past jobs they didn't know about
- Built it on my own, from planning and design to Azure deployment and rollout, with Microsoft sign-in and seven permission levels that admins manage in the app instead of raising an IT request
- Wrote the Python pipeline that pulls the Outlook work-order calendar, CRM exports and monthly service schedules into one database, covering 17,000 appointments
- Jobs sync live between engineers and planners, so a job added while an engineer is out still reaches them
- The warehouse uses it to track stages on new installations and to track PC stock with NFC tags

Support and systems

- Promoted from Helpdesk to Tier 2 Technical Support within 8 months
- Second-line support for 300+ retail sites (B&Q, PPG, Farrow & Ball) using Citrix and Azure AD, plus Windows PC builds, GPOs and patching
- Built and maintain the company Shopify store (eskensonline.com) and corporate website

PERSONAL PROJECT: AI VIDEO PRODUCTION TOOL

- Python (Flask) app that takes a video title and produces a finished documentary-style video
- Chains several LLMs (Groq Llama 70B, Google Gemini 2.5), each handling one step: research, script, narration cleanup, graphics and final output
- Supports ElevenLabs and Fish Audio for voiceover, and pulls in live news headlines through an API
- React/TypeScript timeline editor laid out like Premiere Pro, so any part of the video can be edited
- Renders video with Remotion, using 60+ animated graphic templates driven by live data

TECHNICAL SKILLS

Software & AI: Python · TypeScript · React · Next.js · Flask / FastAPI · Node.js · REST APIs · LLM APIs · Prompt Engineering · Claude Code · Remotion

Dev Tools: Git · GitHub · GitHub Actions

Cloud & Data: Azure App Service · Azure Postgres · Entra ID authentication · Role-based access control · SQL · Tailwind CSS · Shopify (JS)

Infrastructure: Azure AD / Entra · Microsoft 365 · PowerShell · Linux CLI · Citrix · Windows Build & GPO · IAM · Network Diagnostics · CRM Admin

EDUCATION

BSc (Hons) Computer Security, 2:1 | Liverpool John Moores University
